

FORMAX Headers FXH Lightning

Product Overview

FXH Lightning is a double-stroke, single die header offering more uptime and quick changeovers. Most importantly it produces parts fast..... "Lightning" fast.

Many of the same innovative and production proven features that were introduced on FORMAX are standard on FXH Lightning machines. Those features included precision linear feed and automated adjustment of the feed and kickout. The combination of the heading side guiding system and the mechanical locking of the oscillating punch rocker, make for consistent and quality parts. Since it's FORMAX you can count on the high speed and production output, now with a "Lightning fast" header.

FXH Lightning	Cutoff Diameter	SPM-Max
FXH1	5mm	470
FXH2	6.5mm	400

All dimensions are in millimeters unless otherwise noted. Max speed refers to shortest stroke model specification.
